Michael Johnson added to Do Not Contact — Asked by phone not to be contacted yesterday

Contact lists live in Excel. Sending a WhatsApp campaign from them is slow and risky.

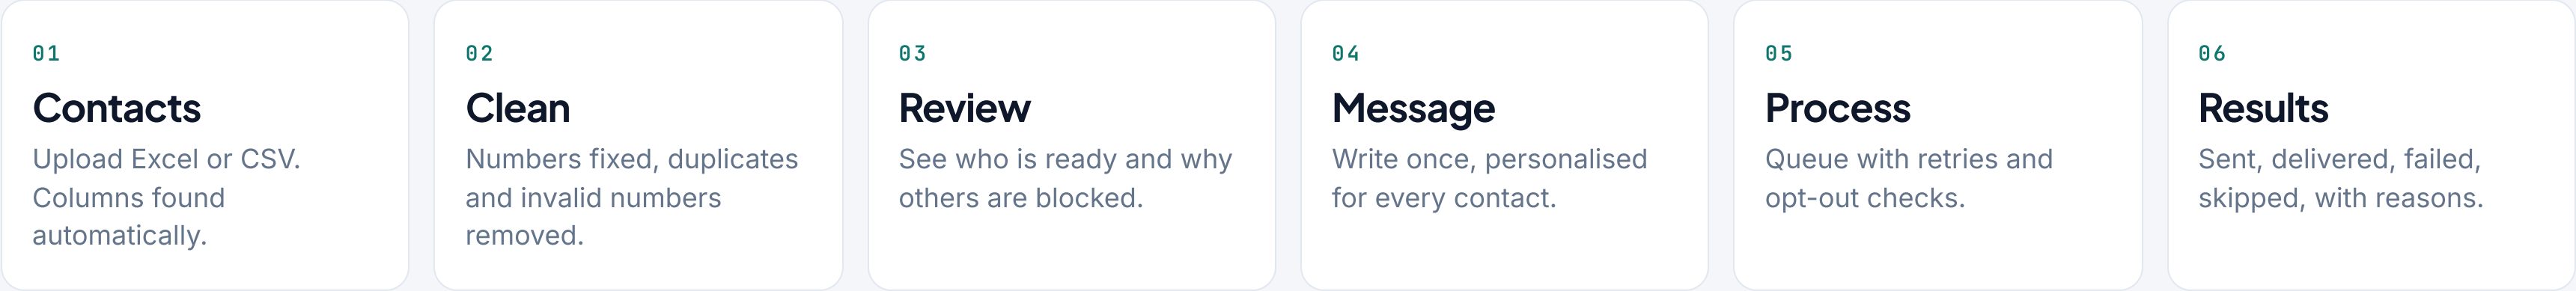

- Numbers typed every way: 050..., +971..., 00971..., two in one cell
- The same person appears several times
- No clear record of who agreed to be contacted, or who said STOP
- The same message copied and pasted hundreds of times
- No record afterwards of who got it, who didn't, and why

THE GOAL

“I upload my contacts, prepare my message, start, and clearly see what happened.”

The risk with manual work isn't only the time. Messaging people who opted out can get a WhatsApp business number restricted.

One simple journey. Every step has one clear action.

A business user does all of this without technical knowledge. The same steps also run automatically from n8n.

BUSINESS

Business Name

e.g. Al Noor Store

WhatsApp opt-in

Opt-in is read from the WhatsApp Opt-in column. Contacts marked "No" go to the Do Not Contact list. Blank ones are saved as Needs opt-in and won't be messaged.

Write the message once. Every contact gets their own name and business.

Built for the official WhatsApp Business Cloud API

TESTING

Sandbox WhatsApp provider

Runs the full sending flow (delivery updates, failures, retries and STOP replies) without contacting real numbers. Ideal for testing and training.

PRODUCTION

WhatsApp Business Cloud API

Implemented as a provider. Switched on with the client's Meta credentials, approved message templates and the status webhook.

- Only contacts with a WhatsApp opt-in are messaged
- Do Not Contact is checked again right before every message
- No WhatsApp Web bots, no anti-ban tricks, no rate-limit evasion

Simple on the surface. Powerful underneath.

FRONTEND

React · TypeScript · Tailwind

BACKEND

Python FastAPI · SQLAlchemy · SQLite / Postgres

AUTOMATION

n8n workflow (importable JSON) over a REST API

WHATSAPP

Provider layer: Sandbox · official Cloud API

DATA

Excel/CSV import, E.164 numbers, Excel export

QUALITY

41 backend tests · 33-step browser test · real n8n run

Need your contact lists turned into safe, personalised WhatsApp campaigns, or another Excel / CRM / n8n automation? I can build the same kind of workflow around your own accounts.
